

Generics

use site variance / projections

```
val ns: Array<Int> = arrayOf(1, 2, 3, 4)
```

```
val concat = joinInt(ns)
```

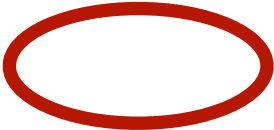

```
fun joinInt(a:Array<out Any>):String{joinToString{it.toString()}}
```

public class Array<T>

The function just reads
from the Array

1, 2, 3, 4

Generics

use site variance / projections

```
public class Array<T>
```

The function just reads
from the Array

```
fun joinIt(a: Array<out> Any>): String = a.joinToString { it.toString() }
```

```
val ns: Array<Int> = arrayOf(1, 2, 3, 4)
```

```
val concat = joinIt(ns) 1, 2, 3, 4
```

Generics

use site variance / projections

```
public class Array<T>
```

The function just reads
from the Array

```
fun joinIt(a: Array<*>): String = a.joinToString { it.toString() }
```

```
val ns: Array<Int> = arrayOf(1, 2, 3, 4)
```

```
val concat = joinIt(ns) 1, 2, 3, 4
```
